greenscaping® products

CENTURION

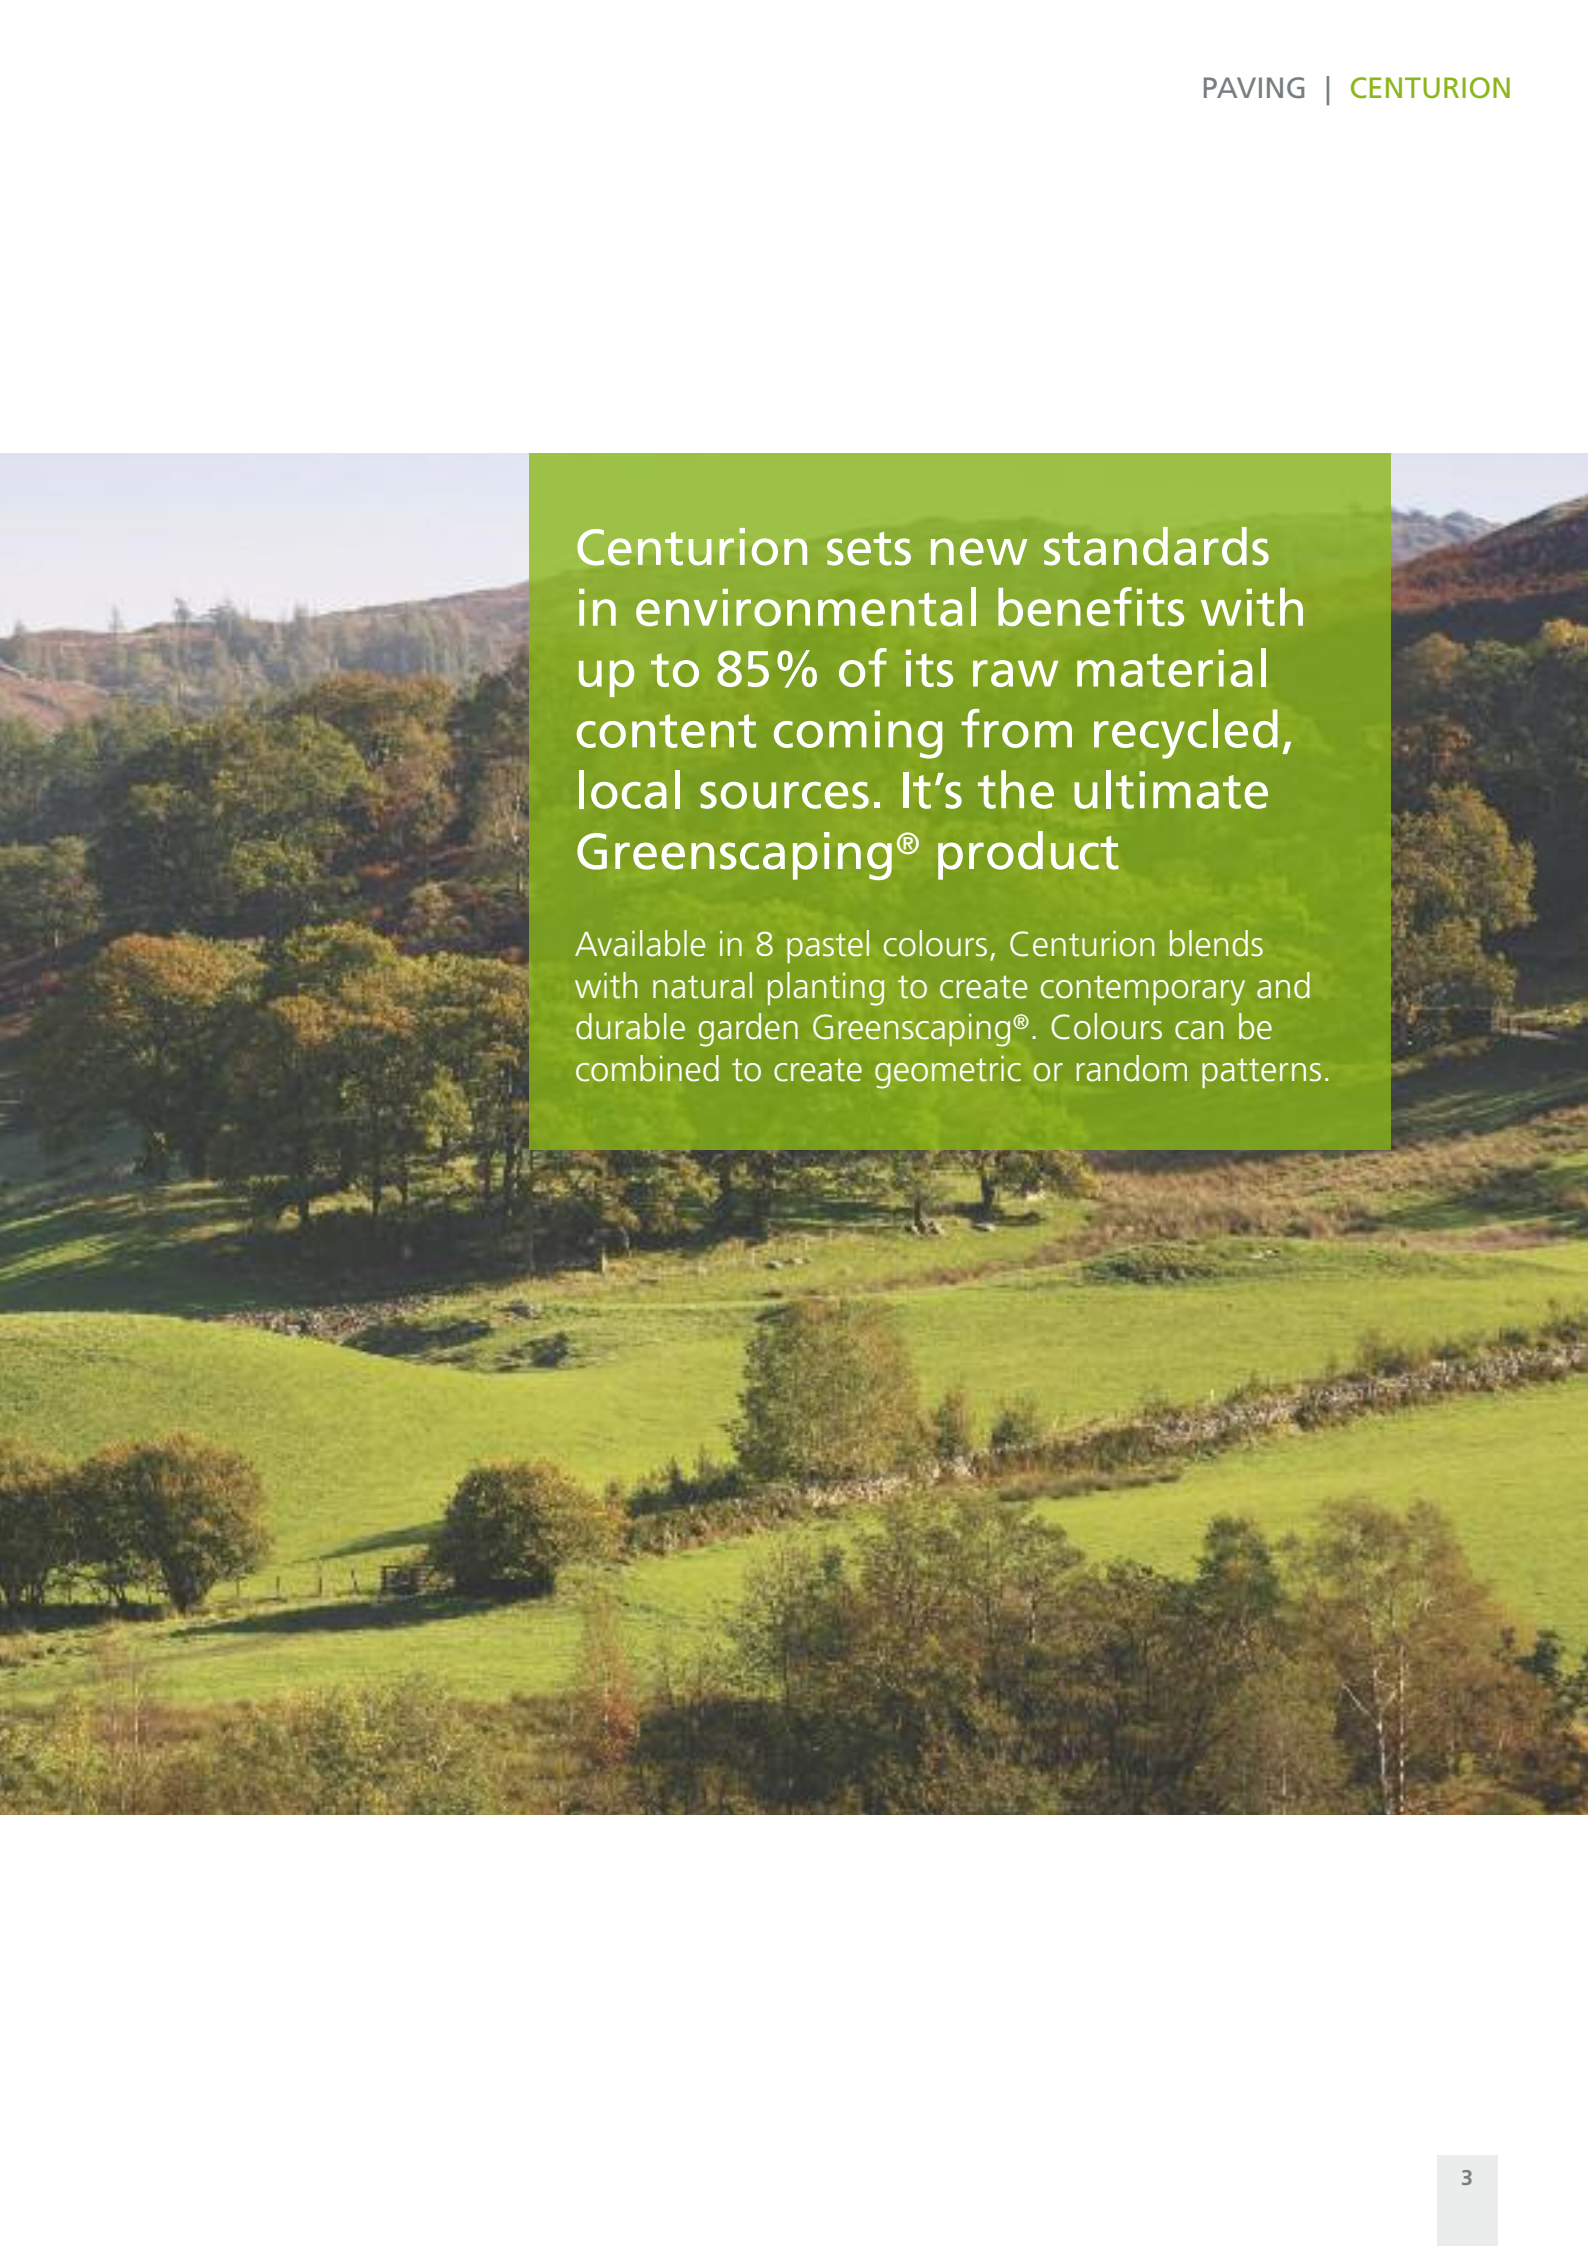

PAVING

Greenscaping® is hard landscaping which is kinder to the environment*

Greenscaping® products are kinder to the environment than traditionally manufactured alternatives because they are manufactured from locally sourced raw materials* which have been recycled from industrial bi-products rather than using traditional unsustainable or quarried materials

Centurion sets new standards in environmental benefits with up to 85% of its raw material content coming from recycled, local sources. It's the ultimate Greenscaping® product

Available in 8 pastel colours, Centurion blends with natural planting to create contemporary and durable garden Greenscaping®. Colours can be combined to create geometric or random patterns.

Natural, Silver Grey & Charcoal - 600 x 600mm

Natural with Charcoal Edging & Planks - 450 x 450mm

Buff - 600 x 600mm with Edging Planks

Ochre Blend: Buff, Mocha & Cappuccino with Natural Edging - 600 x 600mm

Paving Colours

Paving Sizes

Every effort is made to ensure that colour samples match as closely as possible to the product.
Due to printing and photographic processes, all colours should be used as a guide only.

Edging Details

The careful use of complementary or contrasting edging will provide the finishing touch to your project. But with a little imagination and a few simple cuts, any DIYer can create a stunning effect. We have detailed a few examples of what can be achieved.

Contrasting Natural, Silver Grey and Charcoal

Mason's Mitre

External corner formed with corner block

4 courses of 150mm x 600mm Charcoal

Internal Mitre

To ensure your project has a professional finish Oakdale recommend the use of GEO-FIX jointing compound and PATH & PATIO SEAL from Everbuild.

600x150	597x145.5	50	natural, silver grey	40	10	400	3.6	9.19
600x150	597x145.5	50	buff, mocha,cappuchino, red, marrigold,charcoal	40	10	400	3.6	9.91

How is our Carbon Footprint calculated?

This is a cradle to gate calculation. This means it takes into account the extraction/creation and primary processing of the raw materials; transporting them to our plant; processing them into our products and packaging them for the customers (the manufacture of the packaging materials is also included).

Processing energy is relevant to the calendar year 2012. All other activity data, including material type and quantity, packaging, supplier data and methods of transport, was current as of Summer 2013. As specified by the PAS 2050 product carbon footprinting standard, primary activity data was collected for all operations under our control, including material input, packaging use, and processing energy.

There are no non-attributable processes included in the inventory. The only excluded attributable process is transport of packaging materials from the supplier, which was excluded on grounds of materiality.

Emissions factors for materials were sourced from secondary data from reliable and industry-standard sources including Bath University's ICE database, Ecolnvent, the Carbon Trust FPX database, and WRAP's AggRegain database. For most materials, an industry-agreed standard emissions factor was readily available. UK DECC / Defra 2012 emissions factors were used for transport and energy emissions. All emissions factors apply to Europe and, in most cases, to the UK; and all were published within the last ten years.

The calculations are in compliance with the Greenhouse Gas Protocol Product Standard Product. A relevant product rule, International EPD System CPC 3754: Tiles, flagstones, bricks and similar articles, of cement, concrete or artificial stone, Version 2.0, August 2011, was also referred to.
